FLOWFRESH

HACCP INTERNATIONAL CERTIFIED

ANTIMICROBIAL FLOORING

Flowfresh; our hygienic polyurethane cement, has been developed to provide the food & beverage industry with a superior hygienic flooring solution, owing to its impressive performance benefits and antimicrobial additive Polygiene®.

The silver ions in Polygiene® are homogeneously distributed throughout the floor and migrate to the surface. The cell membrane of bacteria on the surface of the floor is penetrated by the silver ions and destroyed.

Polygiene® has been proven effective in both dry and wet zones, and with some systems available with UV stable formulations, the Flowfresh range is suitable not only for food & beverage environments, but also for a variety of industries including chemical processing and pharmaceutical production.
